Product Description

Product Description:

The Inflatable Floating Water Park is a must-have for any water enthusiast looking to create a fun and exciting experience on the water. This versatile product serves as a floating island for lake adventures, a water blow up park for endless entertainment, and a thrilling floating water park for all ages to enjoy.

With a minimum order quantity of 1 piece, this inflatable water park is perfect for personal use, rental businesses, resorts, or any water-based establishment. The weight of the water park is determined by the size you choose, ensuring easy transportation and setup. Shipping the Inflatable Floating Water Park is convenient as it can be done by sea, air, or express delivery, allowing for flexibility based on your location and urgency of need. Whether you are setting up an amusement park, enhancing a swimming pool area, or creating a full-fledged water park attraction, this product is adaptable to various environments.

The size of the Inflatable Floating Water Park is fully customizable to suit your specific requirements and available space. Whether you have a small lake or a large water body, this water park can be tailored to fit perfectly and provide maximum enjoyment for everyone. Designed for multiple uses, the Inflatable Floating Water Park is suitable for amusement parks, swimming pools, and water parks. It offers a wide range of activities and attractions that cater to different preferences and age groups, making it an ideal choice for family-friendly entertainment.

Whether you are looking to add an exciting feature to your resort's lake, create a fun-filled water play area in your backyard swimming pool, or set up a full-scale water park attraction, the Inflatable Floating Water Park is the perfect solution. Its versatility, durability, and customizable options make it a top choice for water-based entertainment.

Color: Customized

Support and Services:

Our Inflatable Floating Water Park product comes with comprehensive product technical support and services to ensure you have the best experience. Our team of experts is available to assist you with any questions or issues you may encounter. Whether you need help with setup, maintenance, troubleshooting, or any other inquiries, our technical support team is here to help.

Packing and Shipping:

Product Packaging:

The Inflatable Floating Water Park will be carefully packaged in a durable cardboard box to ensure safe transportation. The product will be securely wrapped in protective materials to prevent any damage during shipping.

Shipping:

Once your order is confirmed, the Inflatable Floating Water Park will be shipped out within 1-2 business days. We use reliable shipping services to deliver your product in a timely manner. You will receive a tracking number to monitor the status of your delivery.

FAQ:

Q1. Can I customize my inflatable floating park?

A1. Absolutely! Whether it's about the size, shape, or color, just let us know your requirements. We're fully equipped to bring your vision to life.

Q2. Does an inflatable park need a constant air pump for inflation?

A2. Our products don't require continuous air inflation. They are designed to be inflated just once and then remain sealed, eliminating the need for a constant air source.

Q3. How are the modular sport water park components connected to one another?

A3. We use 2 connector straps and 1 safety flap for the connection. The two connector straps are fastened to the anchor plates beneath the products. After that, the safety flap is placed over the two products and secured with magic tape.

Q4. What is the required size (length x width in meters) of the area? And how far from the beach line should it be?

A4. The area "outside the water park you choose" should be approximately 10 meters wider and 10 meters longer. You should position it about 10 meters from the shoreline (this can vary slightly depending on the water depth). People can walk into the water and swim the 10 - meter distance to reach the water park. Some consider building a walkway, but swimming to it is more enjoyable.

Q5. How much time is needed to assemble the water park games system and get it ready

for use?

A5. The first - time setup will take two days mainly because of the need to install anchors and other related components. Once the anchors are in place, you can drag the park out of the water in two hours without deflating it. However, this is only necessary during violent storms to protect and secure it. For typical storms, leaving it in the water won't cause any damage.

Q6. How many employees should we hire to maintain the water park games system and provide customer service?

A6. For a large - sized water park, like the 120 - unit park we mentioned, you'll need a staff of at least 10 people per day. Most of them should be qualified lifeguards. The non - lifeguard staff are the shore - line workers, but they should hold a first - aid certificate for handling emergencies. Among the 10 - person team, about 6 should be on - duty lifeguards, with 2 rotating for breaks and lunch. One person is responsible for selling tickets, and another monitors life jackets and acts as a loud - speaker instructor. These staff can relieve each other for restroom breaks and can eat while on their shift, as their tasks are relatively less strenuous. And you still have the other 2 lifeguards who can offer assistance when needed.

Q7. How long does it take to set up the park on the water?

A7. The setup time depends on the quantity and size of the products, as well as the number of setup workers. For instance, if the anchors are already installed, setting up a 100 - person capacity aqua park by 6 people will take 1 - 2 days.

Q8. What's the lifespan of the product when used in fresh water and salt water?

A8. In salt water, the lifespan is 2 years, while in fresh water, it can last for 5 years. With proper usage and maintenance, you may even extend its lifespan.

Q9. Could you send me some drawings of the land - setup part for reference?

A9. Certainly! Once you have a specific location in mind, send me photos and, if possible, a rough sketch with approximate dimensions. I'll review it and offer suggestions to help you achieve the best setup.
